Why modernisation programmes stall at week 8

And what actually fixes it

AIDEN AI

THE PATTERN

Every bank. Every insurer. Same story.

- **Business rules** — buried and undocumented
- **Dependencies** — fragmented across systems
- **SMEs** — departed or unavailable

The programme stalls. Again.

THE ROOT CAUSE

> *"Nobody documented it. The people who built it have moved on."*

Decades of pricing logic, eligibility rules, and product controls — embedded in systems that new teams can't read with confidence.

This is a knowledge problem.

HOW AIDAP SOLVES IT

01

7 AI agents read your system landscape

Hours, not months. Every COBOL rule, every JCL dependency, every workflow — extracted and translated into plain English.

HOURS · NOT MONTHS

02

Business rules surfaced as structured knowledge

03

Migration path generated with dependency mapping

THE OUTPUT

Your system, finally legible

Visible. Structured. Governable.
For the first time.

See your system in 48 hours

Discovery session. Your architecture team. Our agents. One system domain mapped. No commitment.
