AIDAP · B2B OPERATIONS

Partner onboarding, rebuilt as a pipeline.

AI-led. Governed. Measurably faster every time.

AiDAP

THE REALITY

Every new partner is a small project.

Documents, email threads, spreadsheets, tribal knowledge.

THE COST

Weeks-to-months cycles. No real SLA.

Quality depends on who happens to build the map.

THE SHIFT

Onboarding is a pipeline, not a project.

Agents run the lifecycle. Humans govern the edges.

01 · INTAKE

AI reads the specs. Questions close the gaps.

Docs, samples, email — parsed into structured intake.

02 · STANDARDS

EDI, XML, JSON, CSV, APIs — and every variant.

Real B2B isn't clean. AiDAP handles the exceptions.

03 · MAPPING

Confidence-scored maps. Humans review what matters.

Templates reused. Variants captured as deltas.

04 · CONNECTIVITY

AS2, SFTP, HTTPS, REST, SOAP — one workflow.

Endpoints, credentials, acknowledgments, all governed.

05 · COLLAB · LEARNING

One portal. One knowledge graph.

Every onboarding makes the next one faster.

NEXT STEP

Bring a real onboarding pattern. See it run.

30-minute walkthrough with an AiDAP architect.
