AIDEN · TECH OPERATIONS

Stop running operations. Start governing them.

Autonomous operating model for B2B ecosystems.

Aiden

THE REALITY

Your best engineers are clearing L1 tickets.

Not building resilience. Not optimizing the platform.

THE COST

Monitoring tells you what broke. Nothing more.

Runbooks live in wikis. Resolution depends on who picks up.

THE SHIFT

From reactive support to autonomous operating model.

Agents execute. Humans govern. Leaders see ahead.

01 · KNOWLEDGE GRAPH

Operational memory for the enterprise.

Partners, transactions, incidents, SLAs — all connected.

02 · INFERENCE MODELS

Reasoning, not static rules.

Predict SLA breaches before they hit.

03 · DYNAMIC AGENTS

Confidence-scored. Policy-guarded.

Execution prioritised by impact, not ticket queue.

04 · EXECUTABLE RUNBOOKS

Runbooks as code. Not wiki pages.

Identify. Check. Remediate. Validate.

05 · GOVERNED ESCALATION

L1 autonomous. L2 supervised. L3 engineering only.

L3 stops absorbing L1 work.

NEXT STEP

Bring a real operational pattern. See it run.

30-minute walkthrough with an Aiden architect.
