AI-POWERED TESTING | AIDEN AI

Your test tool assumes you know the app.

AIDAP-TX doesn't.

THE PROBLEM

Testing is not a scripting problem.

Enterprise testing requires understanding requirements, process flows, dependencies, and where human judgment matters — before a single test is written.

- Disconnected requirements
- Brittle scripts
- Heavy SME dependency
- Late defect discovery
- Poor traceability

THE APPROACH

Build a blueprint. Then automate.

AIDAP-TX interprets requirements, crawls your application, and maps dependencies before generating tests — so every test is grounded in context.

Understand

Requirements, flows & system context

Blueprint

Map dependencies & generate test design

Validate

Execute, trace, and confirm confidence

FULL COVERAGE

UI. API. Backend. One platform.

UI Testing

Screens, workflows, and end-to-end user journeys validated against expected behavior.

FRONT-END

API Testing

Service contracts, integration validation, and response schema verification across services.

INTEGRATION

Backend Testing

Data integrity, business rules, and parallel system comparison for migration assurance.

DATA LAYER

BUSINESS IMPACT

Less effort. Higher accuracy. Lower risk.

Reduced SME dependency

AI interprets requirements and designs test cases — your domain experts focus on exceptions, not scripts.

Faster delivery

Blueprint-driven automation cuts test cycle time by eliminating the manual test design phase entirely.

Full traceability

Requirement to execution, every step is auditable — built for compliance-sensitive programs.

BUILT FOR MODERNIZATION

Parallel testing. Model-based validation.

Compare legacy and target systems side by side. Test behavior against requirements and intent. AIDAP-TX is built for programs where accuracy and confidence matter as much as speed.

LEGACY SYSTEM

Source Environment

- Existing business logic
- Historical data patterns
- Known behaviors & edge cases
- Baseline output capture

Validate

TARGET SYSTEM

Modern Environment

- Rebuilt logic verification
- Output parity confirmation
- Regression surface mapping
- Confidence scoring

Test smarter.
Accelerate transformation.

Connect with Aiden AI to explore AIDAP-TX for your modernization, migration, or quality engineering program.
